DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-13, 15, drawn to the betacellulin mutein product, method of making, the pharmaceutical composition and the method of treatment.

Group II, claim(s) 14, drawn to the pharmaceutical composition.

Group III, claim(s) 16, drawn to the use of a betacellulin mutein.

The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Groups I and III are drawn to methods that recite structurally and functionally distinct elements, are not required one for the other and/or achieve different goals. Group II is drawn to a different product from the product claimed in Group I. The special technical feature of Group I is the betacellulin mutein product, method of making, the pharmaceutical composition and the method of treatment. The special technical feature of Group II is the pharmaceutical composition. The special technical feature of Group III is the use of a betacellulin mutein.

A search and examination of the methods in one patent application would result in an undue burden, since the methods are not co-extensive, the classification is different and/or the subject matter is divergent. Furthermore, PCT practices do not provide for examination of multiple methods of using the first claimed product.

In addition, the instant claims recite several different polypeptide sequences. PCT Rules provide for examination of one product, one method of making the product and one method of using the product. Different sequences constitute different products, since they have diverse sequences, coding regions and/or impart structural and functional differences. Applicant is required to elect one polypeptide (SEQ ID NO:).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, separate search requirements, and/or recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim

Art Unit: 1647

remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Regina M. DeBerry whose telephone number is (703) 305-6915. The examiner can normally be reached on Mondays-Fridays 8:00 a.m. - 4:30 p.m.
